

Exponential sinusoidal decay, function:  $u(t) = e^{-0.05t} \cos(1.5t)$ , samples = 1301

AM modulation, function:  $u(t) = (1 + 0.5 \cos t) \cdot \cos(20t)$ , samples: 1301

Effective power: function:  $p(t) = \hat{u}\hat{i} \sin^2 \omega t$  ( $\cos \varphi = 1$ ), samples = 101

$$\begin{aligned} p(t) &= u(t) \cdot i(t) = \hat{u} \sin(\omega t) \cdot \hat{i} \sin(\omega t) \\ &= \hat{u}\hat{i} \sin^2(\omega t) \end{aligned}$$

$$\begin{aligned} P_{gem} &= \frac{\hat{u}\hat{i}}{T} \int_0^T \sin^2(\omega t) dt \\ &= \frac{1}{2} \hat{u}\hat{i} \end{aligned}$$

Complex spiral, function:  $\underline{z} = e^{-0.05\varphi}(\cos \varphi + j \sin \varphi)$ , samples = 301
